ROOFING PM

Roofing Resources, Inc. has grown to become a multi-million dollar roof and masonry management firm committed to building envelope analysis and client solutions. RRI provides unequaled expertise, experience and technology for hundreds of clients throughout the United States.

RRI has developed a total roof management service. Our expertise in investigative technology, site management, utilization of quality integrated contractors, and cost effective material system suppliers is unequaled.

RRI also provides design assistance specification packages to solve varied roof problems and performs studies to establish long and short-term financial plans. Roofing Resources' exclusive Roof Guardian Preventative Maintenance Program provides our clients with unrivaled long-term inspection, care, and documentation, coupled with a secure, state-of-the-art, online browser-based database.

High Performance Biobased & Green Roof Systems

Roofing Resources, Inc. has developed programs to provide high performance, environmentally sound roof system options. Green roof technologies incorporate vegetated gardens over waterproofing membranes to ensure sustainable roof systems. Biobased roof, masonry, and metal coatings, derived from soy-oil polymers, provide applications that outperform traditional petroleum waterproofing equivalents. Both technologies return improved life cycle costs, provide a multitude of environmental and economic benefits, meet LEED requirements, and assist meeting Federal mandates, including:

- 2002 Farm Bill
- USDA FB4P Preferred Procurement Program
- Energy Policy Act of 2005
- GSA P100 Sustainable Design Efficiency Best Practices
- The Memorandum of Understanding between Department of State and General Services Administration

RRI can provide sustainable roof opportunities that can be incorporated in the repair and replacement of your building roofs.
